## Our helpful guide to

## BAREROOTED PLANTS

Available from mid-November to March, weather permitting

NURSERY

An economical and attractive way of planting hedges and single young trees, during the dormant season November-March. Many are available in bundles of ten, to create anything from a formal beech hedge to a mixed planting to attract and shelter wildlife, whilst providing them with a valuable food source.

For the most part, a planting distance of 45cm between plants is ideal. If planting a double row, offset the two rows, so the plants are staggered. Allow 45cm between the two rows.

Keep grass away from the base of the planting, at least until the hedge is well established.

VARIETY	СМ	Each	Bundle of 10
Acer campestre (Field Maple)	40-60	£3	
Alnus cordata (Italian Alder)	40-60	£2	
Betula pendula (Silver Birch)	80-100	£4
